

Software Engineer with a focus on designing and automating hybrid-cloud environments across AWS and Nutanix. Proven record building IaC-driven pipelines that eliminate manual provisioning, accelerate developer self-service, and harden CI/CD workflows. Consistently contribute to collaborative environments, delivering high-quality solutions that drive business objectives.

Experience

Ally Financial Inc.

Detroit, MI

Software Engineer

July 2024 – Current

- Architected a multi-cloud self-service full-stack application on AWS, giving internal engineers on-demand access to features such as Akamai certificate renewals and Infoblox DNS provisioning across networking and hybrid-cloud initiatives through a centralized platform
- Utilized assistance from Claude Code with custom skills to build and refactor Next.js applications alongside existing Terraform modules and Ansible playbooks, reducing delivery time significantly
- Replaced days-long manual Akamai onboarding process with a GitLab CI/CD pipeline backed by custom Terraform modules, cutting provisioning time from days to under one hour
- Automated reverse-mapping DNS zone creation in Infoblox via Python and GitLab pipelines, enabling rapid bulk provisioning of hundreds of zones with zero manual entries from the Infoblox GUI
- Built Terraform modules and Ansible playbooks for NGINX OSS and NGINX+ reverse-proxy load balancers in Nutanix, letting application teams provision their own load-balancing infrastructure through IaC
- Integrated Nutanix-specific deployment logic into the company's standard GitLab DevSecOps pipeline scripts in Python, enabling consistent CI/CD for hybrid cloud workloads alongside AWS services

Allstate

Remote

Full-stack Developer Intern

May 2023 – August 2023

- Built multiple API controllers and service classes in Java/Spring Boot, extending core backend capabilities shipped to production
- Reached 95% unit and mutation test coverage using JUnit, Mockito, and Pitest, reducing the risk of regressions in production deploys
- Configured CI/CD pipelines with Gradle, Jenkins, and SonarQube, standardizing automated quality gates for backend API deployments
- Validated API contracts end-to-end with Postman, identifying and resolving performance and reliability issues before release

Education

Wayne State University

Detroit, MI

Bachelor of Science in Computer Science, 4.0 GPA

December 2023

Certifications

AWS Certified Developer Associate, Amazon Web Services Training and Certification

July 2026

Acquired skills in writing, deploying, and debugging cloud-based applications using AWS services and core developer tools

AWS Solutions Architect Associate, Amazon Web Services Training and Certification

March 2025

Gained in-depth knowledge in creating scalable, secure, and cost-optimized cloud architectures using core AWS services

Nutanix Certified Associate, Nutanix

August 2024

Developed foundational skills in managing Nutanix hybrid cloud infrastructure, including AHV virtualization and Prism Central

AWS Certified Cloud Practitioner, Amazon Web Services Training and Certification

February 2024

Acquired a broad understanding of AWS cloud concepts, security, global infrastructure, and pricing models

Technical Skills

Areas of Expertise: DevSecOps, Cloud, Application Delivery Infrastructure, Agile Methodologies, CI/CD, Test Driven Development, Developer Collaboration, Effective Communication, Source-code Management, Build Releases

Frameworks: Cloud-init, Spring Boot, Next.js, Express.js, React.js, .NET, Angular

Languages: Python, TypeScript, YAML, Terraform, Java

Other: Git, GitLab, GitHub, Jenkins, MySQL, MongoDB, Firebase, Jira
